1.0 Introduction

The YFRF-200 is a PC-linked contactless smart card reader/writer used for accessing ISO 14443-4 Type A and Type B, MIFARE®. The YFRF-200 serves as the intermediary device between the computer and the contactless tag via the USB interface or RS-232. The reader carries out the command from the computer whether the command is used to communicate with a contactless tag, or control the device peripherals (LED or buzzer). This API document will discuss in detail how the commands were implemented for the contactless interface and device peripherals of the YFRF-200.

1.1 Features

- USB 2.0 Interface (Virtual Comport)
- or RS-223 or RS-232(TTL level)
- Smart Card Reader:
 - o Built-in antenna for contactless tag access, with card reading distance of up to 50 mm (depending on tag type)
 - o Support for ISO 14443 Part 4 Type A and B cards, MIFARE,
- o Application Programming Interface:
 - o Custom Protocol : similar PC/SC
- o Built-in Peripherals:
 - o User-controllable LED
 - o User-controllable buzzer
- o Supports Android™ 5.0 and above
- o Supports 2 SIM Socket
- o Supports TMoney, Cashbee, and local cards (Can be developed by user request)
- o Board Size : 50 x 100 mm including antenna Size : 50 x 60 mm

1.2 USB Interface

The YFRF-200 is connected to a computer through USB as specified in the USB Specification 2.0.

| Pin | Signal | Function |
|-----|------------------|---|
| 1 | V _{BUS} | +5 V power supply for the reader (Max. 200 mA, Normal 100 mA) |
| 2 | D- | Differential signal transmits data between YFRF-200 and PC |
| 3 | D+ | Differential signal transmits data between YFRF-200 and PC |
| 4 | GND | Reference voltage level for power supply |

Table 1: USB Interface

1.3 RS-232 Interface

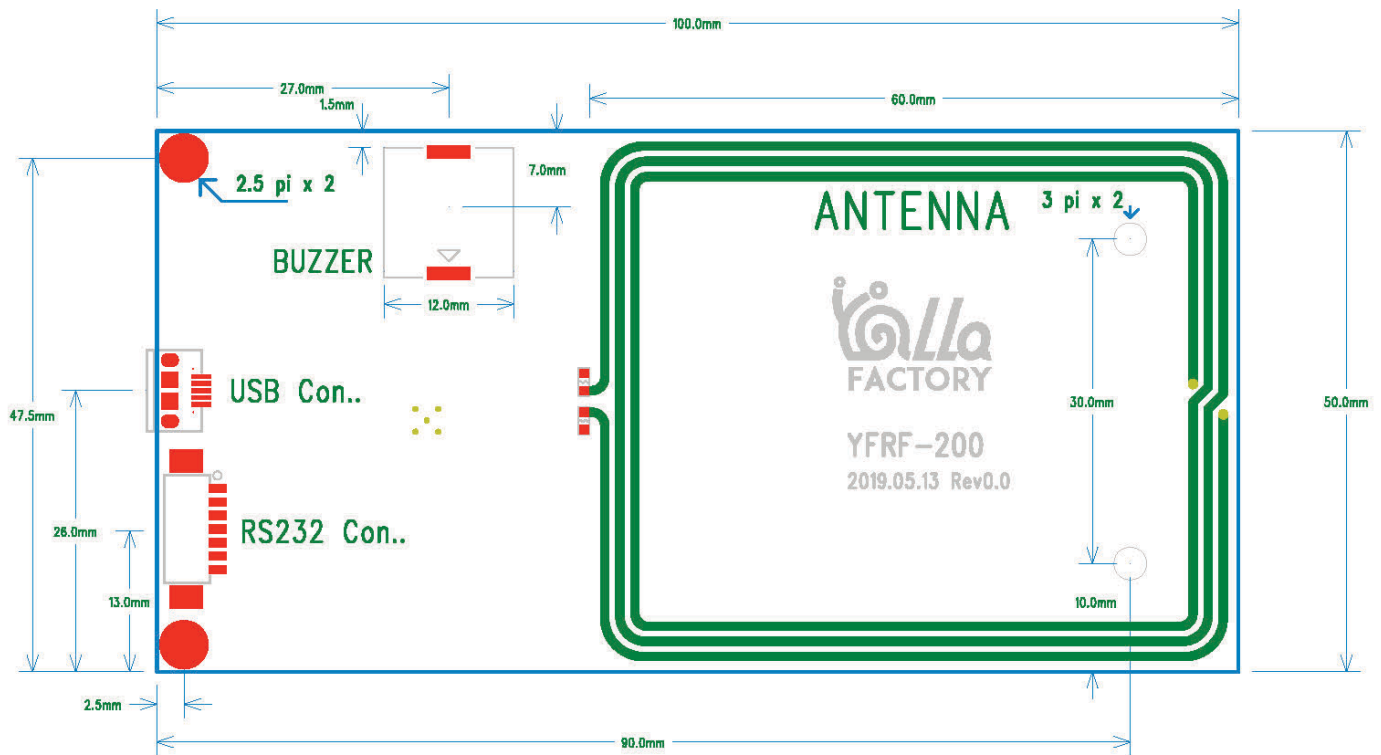

The YFRF-200 is connected to a computer through RS-232 with 115200bps

| Pin | Signal | Function |
|-----|------------------|---|
| 1 | V _{BUS} | +5 V power supply for the reader (Max. 200 mA, Normal 100 mA) |
| 2 | RX | TTL or RS-232 (Optional) |
| 3 | GND | Reference voltage level for power supply |
| 4 | TX | TTL or RS-232 (Optional) |
| 5 | GND | Reference voltage level for power supply |
| 6 | NC | |
| 7 | NC | |

Table 2: RS-232 Interface

1.4 Dimensional Drawing

o Board Size : 50 x 100 mm including antenna Size : 48 x 60 mm

2.0. PICC Interface Description

2.1. ATR Generation

If the reader detects a PICC, an ATR will be sent to the PC/SC driver for identifying the PICC.

2.1.1. ATR format for ISO 14443 Part 3 PICCs

| Byte | Value(Hex) | Designation | Description |
|----------------|--------------|----------------|---|
| 0 | 3Bh | Initial Header | - |
| 1 | 8Nh | T0 | Higher nibble 8 means: no TA1, TB1, TC1 only TD1 is following. Lower nibble N is the number of historical bytes (HistByte 0 to HistByte N-1) |
| 2 | 80h | TD1 | Higher nibble 8 means: no TA2, TB2, TC2 only TD2 is following. Lower nibble 0 means T = 0 |
| 3 | 01h | TD2 | Higher nibble 0 means no TA3, TB3, TC3, TD3 following. Lower nibble 1 means T = 1 |
| 4 To 3+N | 80h | T1 | Category indicator byte, 80 means A status indicator may be present in an optional COMPACT-TLV data object |
| | 4Fh | Tk | Application identifier Presence Indicator |
| | 0Ch | | Length |
| | RID | | Registered Application Provider Identifier (RID) # A0 00 00 03 06h |
| | SS | | Byte for standard |
| | C0 ... C1h | | Bytes for card name |
| | 00 00 00 00h | | RFU |
| 4+N | UUh | TCK | Exclusive-oring of all the bytes T0 to Tk |

<Table 3: ATR format for ISO 14443 Part 3 PICCs>

Example:

ATR for MIFARE 1K = {3B 8F 80 01 80 4F 0C A0 00 00 03 06 03 00 01 00 00 00 00 6Ah}

| ATR | | | | | | | | | | | |
|----------------|-----|-----|-----|-----|-----|--------|-----------------------|----------|-----------|-----------------|-----|
| Initial Header | T0 | TD1 | TD2 | T1 | Tk | Length | RID | Standard | Card Name | RFU | TCK |
| 3Bh | 8Fh | 80h | 01h | 80h | 4Fh | 0Ch | A0 00 00 03 06h | 03h | 00 01h | 00 00 00 00h | 6Ah |

Where:

Length (YY) = 0Ch

RID = A0 00 00 03 06h (PC/SC Workgroup)

Standard (SS) = 03h (ISO 14443A, Part 3)

Card Name (C0 .. C1) = [00 01h] (MIFARE Classic® 1K)

Where, Card Name (C0 .. C1)

00 01h: MIFARE Classic 1K

00 02h: MIFARE Classic 4K

FFh [SAK]: Undefined

2.1.2. ATR format for ISO 14443 Part 4 PICCs

| Byte | Value(Hex) | Designation | Description |
|----------------|------------------|----------------|--|
| 0 | 3Bh | Initial Header | - |
| 1 | 8Nh | T0 | Higher nibble 8 means: no TA1, TB1, TC1 only TD1 is following. Lower nibble N is the number of historical bytes (HistByte 0 to HistByte N-1) |
| 2 | 80h | TD1 | Higher nibble 8 means: no TA2, TB2, TC2 only TD2 is following. Lower nibble 0 means T = 0 |
| 3 | 01h | TD2 | Higher nibble 0 means no TA3, TB3, TC3, TD3 following. Lower nibble 1 means T = 1 |
| 4 To 3+N | XXh | T1 | Historical Bytes: ISO 14443A: The historical bytes from ATS response. Refer to the ISO14443-4 specification. ISO 14443B: The higher layer response from the ATTRIB response (ATQB). Refer to the ISO14443-3 specification. |
| | XXh XX XXh | Tk1 | |
| 4+N | UUh | TCK | Exclusive-oring of all the bytes T0 to Tk |

<Table 4: ATR format for ISO 14443 Part 4 PICCs>

3.0. PICC Commands for General Purposes

3.1. Get Data

This command returns the serial number or ATS of the connected PICC.

Get UID APDU Format (5 bytes)

| Command | Class | INS | P1 | P2 | Le |
|----------|-------|-----|------------|-----|----------------------|
| Get Data | FFH | CAh | 00h 001 | 00h | 00h (Full Length) |

Get UID Response Format (UID + 2 bytes) if P1 = 00h

| Response | Data Out | | | | | |
|----------|--------------|---|---|--------------|-----|-----|
| Result | UID (LSB) | - | - | UID (MSB) | SW1 | SW2 |

Get ATS of a ISO 14443 A card (ATS + 2 bytes) if P1 = 01h Response

| Response | Data Out | | |
|----------|----------|-----|-----|
| Result | ATS | SW1 | SW2 |

Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|---------------------------------------|
| Success | 90 00h | The operation completed successfully. |
| Error | 63 00h | The operation failed. |
| Error | 6A 81h | Function not supported. |

Example:

- To get the serial number of the connected PICC.
 UINT8 GET_UID[5]={FFh, CAh, 00h, 00h, 04h};
- To get the ATS of the connected ISO 14443 A PICC.
 UINT8 GET_ATS[5]={FFh, CAh, 01h, 00h, 04h};

3.0. PICC Commands (T=CL Emulation) for MIFARE Classic Memory Cards

3.1. Load Authentication Keys

This command loads the authentication keys into the reader. The authentication keys are used to authenticate the particular sector of the MIFARE Classic 1K/4K memory card. Volatile authentication key location is provided.

Load Authentication Keys APDU Format (11 bytes)

| Command | Class | INS | P1 | P2 | Lc | Data In |
|---------------------|-------|-----|---------------|------------|-----|--------------|
| Load Authentication | FFh | 82h | Key Structure | Key Number | 06h | Key (6 byte) |

Where:

Key Structure 1 byte.

00h = Key is loaded into the reader volatile memory.

Other = Reserved.

Key Number 1 byte.

00h ~ 01h = Key Location. The keys will disappear once the reader is disconnected from the PC.

Key 6 bytes.

The key value loaded into the reader. e.g., {FF FF FF FF FF FFh}

Load Authentication Keys Response Format (2 Bytes)

| Response | Data out | |
|----------|----------|-----|
| Result | SW1 | SW2 |

Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|--------------------------------------|
| Success | 90 00h | The operation completed successfully |
| Error | 63 00h | The operation failed. |

Example: Load a key {FF FF FF FF FF FFh} into the key location 00h. APDU = {FF 82 00 00h 06 FF FF FF FF FF FFh}

3.2. Authentication

This command uses the keys stored in the reader to do authentication with the MIFARE 1K/4K card (PICC). Two types of authentication keys are used: TYPE_A and TYPE_B.

Load Authentication Keys APDU Format (6 bytes) [Obsolete]

| Command | Class | INS | P1 | P2 | P3 | Data In |
|----------------|-------|-----|-----|--------------|----------|------------|
| Authentication | FFh | 88h | 00h | Block Number | Key Type | Key Number |

Load Authentication Keys APDU Format (10 bytes)

| Command | Class | INS | P1 | P2 | Lc | Data In |
|----------------|-------|-----|-----|-----|-----|-------------------------|
| Authentication | FFh | 86h | 00h | 00h | 05h | Authenticate Data Bytes |

Authenticate Data Bytes (5 bytes)

| Byte1 | Byte2 | Byte3 | Byte4 | Byte5 |
|-------------|-------|--------------|----------|------------|
| Version 01h | 00h | Block Number | Key Type | Key Number |

Where:

Block Number 1 byte. This is the memory block to be authenticated.

Key Type 1 byte

60h = Key is used as a TYPE A key for authentication.

61h = Key is used as a TYPE B key for authentication.

Key Number 1 byte

00h ~ 01h = Key Location.

Note: For MIFARE Classic 1K Card, it has totally 16 sectors and each sector consists of 4 consecutive blocks. E.g. Sector 00h consists of Blocks {00h, 01h, 02h and 03h}; Sector 01h consists of Blocks {04h, 05h, 06h and 07h}; the last sector 0F consists of Blocks {3Ch, 3Dh, 3Eh and 3Fh}.

Once the authentication is done successfully, there is no need to do the authentication again if the blocks to be accessed belong to the same sector. Please refer to the MIFARE Classic 1K/4K specification for more details.

Load Authentication Keys Response Format (2 bytes)

| Response | Data Out | |
|----------|----------|-----|
| Result | SW1 | SW2 |

Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|--------------------------------------|
| Success | 90 00h | The operation completed successfully |
| Error | 63 00h | The operation failed |

| Sectors (Total 16 sectors. Each sector consists of 4consecutive blocks) | Data Blocks (3 blocks, 16 bytes per block) | Trailer Block (1 block, 16 bytes) | } 1KB |
|--|---|--------------------------------------|-------|
| Sector 0 | 00h ~ 02h | 03h | |
| Sector 1 | 04h ~ 06h | 07h | |
| .. | | | |
| .. | | | |
| Sector 14 | 38h ~ 0Ah | 3Bh | |
| Sector 15 | 3Ch ~ 3Eh | 3Fh | |

Table 4: MIFARE 1K Memory Map

| Sectors (Total 32 sectors. Each sector consists of 4 consecutive blocks) | Data Blocks (3 blocks, 16 bytes per block) | Trailer Block (1 block, 16bytes) |
|---|--|---|
| Sector 0 | 00h ~ 02h | 03h |
| Sector 1 | 04h ~ 06h | 07h |
| ... | | |
| ... | | |
| Sector 30 | 78h ~ 7Ah | 7Bh |
| Sector 31 | 7Ch ~ 7Eh | 7Fh |
| Sectors (Total 8 sectors. Each sector consists of 16 consecutive blocks) | Data Blocks (15 blocks, 16 bytes per block) | Trailer Block (1 block, 16bytes) |
| Sector 32 | 80h ~ 8Eh | 8Fh |
| Sector 33 | 90h ~ 9Eh | 9Fh |
| .. | | |
| .. | | |
| Sector 38 | E0h ~ EEh | EFh |
| Sector 39 | F0h ~ FEh | FFh |

Table 5 : MIFARE Classic 4K Memory Map

| Byte Number | 0 | 1 | 2 | 3 | Page |
|-----------------|--------|----------|--------|--------|------|
| Serial Number | SN0 | SN1 | SN2 | Bcc0 | 0 |
| Serial Number | SN3 | SN4 | SN5 | SN6 | 1 |
| Internal/Lock | BCC1 | Internal | Lock() | Lock1 | 2 |
| OTP | OPT0 | OPT1 | OPT2 | OPT3 | 3 |
| Data read/write | Data0 | Data1 | Data2 | Data3 | 4 |
| Data read/write | Data4 | Data5 | Data6 | Data7 | 5 |
| Data read/write | Data8 | Data9 | Data10 | Data11 | 6 |
| Data read/write | Data12 | Data13 | Data14 | Data15 | 7 |
| Data read/write | Data16 | Data017 | Data18 | Data19 | 8 |
| Data read/write | Data20 | Data21 | Data22 | Data23 | 9 |
| Data read/write | Data24 | Data25 | Data26 | Data27 | 10 |
| Data read/write | Data28 | Data29 | Data30 | Data31 | 11 |
| Data read/write | Data32 | Data33 | Data34 | Data35 | 12 |
| Data read/write | Data36 | Data37 | Data38 | Data39 | 13 |
| Data read/write | Data40 | Data41 | Data42 | Data43 | 14 |
| Data read/write | Data44 | Data45 | Data46 | Data47 | 15 |

512bits
or
64 bytes

Table 6: MIFARE Ultralight Memory Map

Example:

1. To authenticate the Block 04h with a {TYPE A, key number 00h}. For PC/SC V2.01, Obsolete.
APDU = {FF 88 00 04 60 00h};
2. To authenticate the Block 04h with a {TYPE A, key number 00h}. For PC/SC V2.07
APDU = {FF 86 00 00 05 01 00 04 60 00h}

Note: MIFARE Ultralight does not need to do any authentication. The memory is free to access.

3.3. Read Binary Blocks

This command retrieves the data blocks from the PICC. The data block/trailer block must be authenticated first.

Read Binary APDU Format (5 bytes)

| Command | Class | INS | P1 | P2 | Le |
|--------------------|-------|-----|-----|--------------|-------------------------|
| Read Binary Blocks | FFh | B0h | 00h | Block Number | Number of Bytes to Read |

Where:

Block Number 1 byte
The block to be accessed.

Number of Bytes to Read 1 byte
Maximum 16 bytes.

Read Binary Block Response Format (N + 2 bytes)

| Response | Data Out | | |
|----------|--------------|-----|-----|
| Result | 0 <= N <= 16 | SW1 | SW2 |

Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|---------------------------------------|
| Success | 90 00h | The operation completed successfully. |
| Error | 63 00h | The operation failed. |

Example:

1. Read 16 bytes from the binary block 04h (MIFARE Classic 1K or 4K)
APDU = {FF B0 00 04 10h}
2. Read 4 bytes from the binary Page 04h (MIFARE Ultralight)
APDU = {FF B0 00 04 04h}
3. Read 16 bytes starting from the binary Page 04h (MIFARE Ultralight) (Pages 4, 5, 6 and 7 will be read)
APDU = {FF B0 00 04 10h}

Note: Please add a 2-second delay when reading NDEF messages in MIFARE Classic 4K cards.

3.4. Update Binary Blocks

This command writes data blocks into the PICC. The data block/trailer block must be authenticated.

Update Binary APDU Format (4 or 16 + 5 bytes)

| Command | Class | INS | P1 | P2 | Lc | Data In |
|----------------------|-------|-----|-----|--------------|---------------------------|--|
| Update Binary Blocks | FFh | D6h | 00h | Block Number | Number of Bytes to Update | Block Data 4Bytes for MIFARE Ultralight or 16 Bytes for MIFARE 1K/4K |

Where:

- Block Number** 1 byte
The starting block to be updated.
- Number of Bytes to Update** 1 byte
16 bytes for MIFARE 1K/4K
4 bytes for MIFARE Ultralight
- Block Data** 4 bytes or 16 bytes.
The data to be written into the binary block/blocks.

Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|---------------------------------------|
| Success | 90 00h | The operation completed successfully. |
| Error | 63 00h | The operation failed. |

Example:

- Update the binary block 04h of MIFARE Classic 1K/4K with Data {00 01 .. 0Fh}
APDU = {FF D6 00 04 10 00 01 02 03 04 05 06 07 08 09 0A 0B 0C 0D 0E 0Fh}
- Update the binary block 04h of MIFARE Ultralight with Data {00 01 02 03}
APDU = {FF D6 00 04 04 00 01 02 03h}

3.5. Value Block Related Commands

The data block can be used as value block for implementing value-based applications.

3.5.1. Value Block Operation

This command manipulates the value-based transactions (e.g., increment a value of the value block etc.)

Value Block Operation APDU Format (10 bytes)

| Command | Class | INS | P1 | P2 | Lc | Data In | |
|-----------------------|-------|-----|-----|--------------|-----|---------|-------------------------------|
| Value Block Operation | FFh | D7h | 00h | Block Number | 05h | VB_OP | VB_Value (4bytes) {MSB...LSB} |

Where:

Block Number 1 byte

The value block to be manipulated.

VB_OP 1 byte

00h = Store the VB_Value into the block. The block will then be converted to a value block. 01h = Increment the value of the value block by the VB_Value. This command is only valid for value block.

02h = Decrement the value of the value block by the VB_Value. This command is only valid for value block.

VB_Value 4 bytes.

The value used for value manipulation. The value is a signed long integer (4 bytes).

Example 1: Decimal -4 = {FFh, FFh, FFh, FCh}

| VB_Value | | | |
|----------|-----|-----|-----|
| MSB | | | LSB |
| FFh | FFh | FFh | FCh |

Example 2: Decimal 1 = {00h, 00h, 00h, 01h}

| VB_Value | | | |
|----------|-----|-----|-----|
| MSB | | | LSB |
| 00h | 00h | 00h | 01h |

Value Block Operation Response Format (2 bytes)

| Response | Data Out | |
|----------|----------|-----|
| Result | SW1 | Sw2 |

Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|--------------------------------------|
| Success | 90 00h | The operation completed successfully |
| Error | 63 00h | The operation failed. |

3.5.2. Read Value Block

This command retrieves the value from the value block. This command is only valid for value block.

Read Value Block APDU Format (5 bytes)

| Command | Class | INS | P1 | P2 | Le |
|------------------|-------|-----|-----|--------------|-----|
| Read Value Block | FFh | B1h | 00h | Block Number | 04h |

Where:

Block Number 1 byte
The value block to be accessed.

Read Value Block Response Format (4 + 2 bytes)

| Response | Data Out | | |
|----------|------------------------|-----|-----|
| Result | Value {MSB ... LSB} | SW1 | SW2 |

Where:

Value 4 bytes.
The value returned from the card. The value is a signed long integer (4 bytes).

Example 1: Decimal -4 = {FFh, FFh, FFh, FCh}

| Value | | | |
|-------|-----|-----|-----|
| MSB | | | LSB |
| FFH | FFH | FFh | FCh |

Example 2: Decimal 1 = {00h, 00h, 00h, 01h}

| Value | | | |
|-------|-----|-----|-----|
| MSB | | | LSB |
| 00h | 00h | 00h | 01h |

Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|--------------------------------------|
| Success | 90 00h | The operation completed successfully |
| Error | 63 00h | The operation failed. |

3.5.3. Restore Value Block

This command copies a value from a value block to another value block.

Restore Value Block APDU Format (7 bytes)

| Command | Class | INS | P1 | P2 | Lc | Data In |
|---------------------|-------|-----|-----|---------------------|-----|-------------------------|
| Restore Value Block | FFh | D7h | 00h | Source Block Number | 02h | 03h Target Block Number |

Where:

Source Block Number 1 byte

The value of the source value block will be copied to the target value block.

Target Block Number 1 byte

The value block to be restored. The source and target value blocks must be in the same sector.

Restore Value Block Response Format (2 bytes)

| Response | Data Out | |
|----------|----------|-----|
| Result | SW1 | SW2 |

Response Codes

| Results | SW1 SW2 | Meaning |
|---------|---------|---------------------------------------|
| Success | 90 00h | The operation completed successfully. |
| Error | 63 00h | The operation failed. |

Example:

- Store a value "1" into block 05h
 APDU = {FF D7 00 05 05 00 00 00 00 01h}
 Answer: 90 00h
- Read the value block 05h
 APDU = {FF B1 00 05 00h}
 Answer: 00 00 00 01 90 00h [9000h]

3. Copy the value from value block 05h to value block 06h

APDU = {FF D7 00 05 02 03 06h}

Answer: 90 00h [9000h]

4. Increment the value block 05h by "5"

APDU = {FF D7 00 05 05 01 00 00 00 05h}

Answer: 90 00h [9000h]

4.0. Pseudo-APDU Commands

The pseudo-APDU commands are used for the following:

- Exchanging data with non-PC/SC-compliant tags
- Retrieving and setting the reader parameters
- Pseudo-APDUs can be sent through the "YFRF-200 PICC Interface" if the tag is already connected
- Pseudo-APDUs can be sent using "Escape Command" if the tag is not yet presented

4.1. Direct Transmit

This is the payload to be sent to the tag or reader.

Direct Transmit Command Format (Length of the Payload + 5 bytes)

| Command | Class | INS | P1 | P2 | Lc | Data In |
|-----------------|-------|-----|-----|-----|-------------------------|---------|
| Direct Transmit | FFh | 00h | 00h | 00h | Number Of Bytes To send | Payload |

Where:

Lc 1 byte.
Number of bytes to send
Maximum 255 bytes

Data In Response

Direct Transmit Response Format

| Response | Data Out |
|-----------------|---------------|
| Direct Transmit | Response Data |

4.2. Bi-color LED and Buzzer Control

This command controls the states of the bi-color LED and Buzzer.

Bi-color LED and Buzzer Control Command Format (9 bytes)

| Command | Class | INS | P1 | P2 | Lc | Data In (4bytes) |
|---------------------------------|-------|-----|-----|-------------------------------------|-----|---------------------------|
| Bi-Color and Buzzer LED Control | FFh | 00h | 40h | LED State Control (Bit 7 --- Bit 0) | 04h | Blinking Duration Control |

Where:

P2 LED State Control

Bi-Color LED and Buzzer Control Format (1 byte)

| CMD | Item | Description |
|-------|------------------------|---------------------------------------|
| Bit 0 | Final State: Red LED | 1 = On; 0 = Off |
| Bit 1 | Final State: Green LED | 1 = On; 0 = Off |
| Bit 2 | State Mask: Red LED | 1 = Update the State 0 = No change |
| Bit 3 | State Mask: Green LED | 1 = Update the State 0 = No change |

Data Out SW1 SW2. Status Code returned by the reader.

| Results | SW1 | SW2 | Meaning |
|---------|-----|-------------------|---------------------------------------|
| Success | 90h | Current LED State | The operation completed successfully. |
| Error | 63h | 00h | The operation failed. |

Current LED State (1 byte)

| Status | Item | Description |
|------------|-------------------|-----------------|
| Bit 0 | Current Red LED | 1 = On; 0 = Off |
| Bit 1 | Current Green LED | 1 = On; 0 = Off |
| Bits 2 – 7 | Reserved | |

4.3. Get firmware version of the reader

This command retrieves the firmware version of the reader.

Command Format (5 bytes)

| Command | Class | INS | P1 | P2 | Le |
|---------|-------|-----|----|----|----|
|---------|-------|-----|----|----|----|

| | | | | | |
|----------------------|-----|-----|-----|-----|-----|
| Get Firmware Version | FFh | 00h | 48h | 00h | 00h |
|----------------------|-----|-----|-----|-----|-----|

Response Format (11 bytes)

| Response | Data Out |
|----------|------------------|
| Result | Firmware Version |

Example:

Response = 59 46 52 46 32 30 30 5F 30 30 31h = YFRF200_001 (ASCII)

4.4. Get the PICC operating parameter

This command retrieves the PICC operating parameter of the reader.

Command Format (5 bytes)

| Command | Class | INS | P1 | P2 | Le |
|------------------------------|-------|-----|-----|-----|-----|
| Get PICC Operating Parameter | FFh | 00h | 50h | 00h | 00h |

Response Format (2 bytes)

| Response | Data Out |
|----------|------------------------------|
| Result | 90h PICC Operating Parameter |

4.5. Set the PICC operating parameter This command sets the PICC operating parameter of the reader.

Command Format (5 bytes)

| Command | Class | INS | P1 | P2 | Le |
|------------------------------|-------|-----|-----|------------------------------|-----|
| Set PICC Operating Parameter | FFh | 00h | 51h | New PICC Operating Parameter | 00h |

Response Format (2 bytes)

| Response | Data Out | |
|----------|----------|--------------------------|
| Result | 90h | PICC Operating Parameter |

PICC Operating Parameter

| Bit | Parameter | Description | Option |
|-----|---|---|---------------------------|
| 7 | Auto PICC Polling | To enable the PICC Polling | 1 = Enable 0 = Disable |
| 6 | Auto ATS Generation | To issue ATS Request whenever an ISO14443-4 Type A tag is activated | 1 = Enable 0 = Disable |
| 5 | Polling Interval | To set the time interval between successive PICC Polling. | 1 = 250ms 0 = 500ms |
| 4 | | The Tag Types to be detected during PICC Polling. | |
| 3 | | | |
| 2 | | | |
| 1 | ISO 14443 Type B | | 1 = Detect 0 = Skip |
| 0 | ISO 14443 Type A #To detect the MIFARE Tags, the Auto ATS Generation must be disabled first. | | 1 = Detect 0 = Skip |

Note: Default Value = FFh

4.6. Set Timeout Parameter

This command sets the timeout parameter of the contactless chip response time.

Command Format (5 bytes)

| Command | Class | INS | P1 | P2 | Le |
|-----------------------|-------|-----|-----|------------------------------------|-----|
| Set Timeout Parameter | FFh | 00h | 41h | Timeout Parameter (Unit: 5sec.) | 00h |

Where:

- P2** Timeout Parameter
- 00h: No Timeout check
 - 01h – FEh: Timeout with 5 second unit
 - FFh: Wait until the contactless chip responds

Response Format (2 bytes)

| Results | SW1 SW2 | Meaning |
|---------|---------|---------------------------------------|
| Success | 90 00h | The operation completed successfully. |
| Error | 63 00h | The operation failed. |

4.7. Set buzzer output during card detection

This command sets the buzzer output during card detection. The default output is ON.

Command Format (5 bytes)

| Command | Class | INS | P1 | P2 | Le |
|---|-------|-----|-----|----------------|-----|
| Set Buzzer Output during Card Detection | FFh | 00h | 52h | PollBuzzStatus | 00h |

Where:

- P2** PollBuzzStatus
- 00h: Buzzer will NOT turn on when a card is detected
 - FFh: Buzzer will turn on when a card is detected

Response Format (2 bytes)

| Results | SW1 SW2 | Meaning |
|---------|---------|--------------------------------------|
| Success | 90 00h | The operation completed successfully |
| Error | 63 00h | The operation failed. |

5.0. Basic Program Flow for Contactless Applications

Step 0. Start the application. The reader will do the PICC Polling and scan for tags continuously. Once the tag is found and detected, the corresponding ATR will be sent to the PC. You must make sure that the PC/SC Escape Command has been set. See Appendix A for more details.

Step 1. The first thing is to connect the "YFRF-200 PICC Interface".

Step 2. Access the PICC by sending APDU commands.

:

:

Step N. Disconnect the "YFRF-200 PICC Interface". Shut down the application.

Notes:

1. The antenna can be switched off in order to save the power.
 - Turn off the antenna power: FF 00 00 00 04 D4 32 01 00h
 - Turn on the antenna power: FF 00 00 00 04 D4 32 01 01h
2. Standard and Non-Standard APDUs Handling.
 - PICCs that use Standard APDUs: ISO14443-4 Type A and B, MIFARE .. etc
 - PICCs that use Non-Standard APDUs: FeliCa, Topaz .. etc.
3. For the YFRF-200 PICC Interface, ISO 7816 T=1 protocol is used.
 - PC → Reader: Issue an APDU to the reader.
 - Reader → PC: The response data is returned.

5.1. How to access PC/SC-compliant tags (ISO 14443-4)?

Basically, all ISO 14443-4 compliant cards (PICCs) would understand the ISO 7816-4 APDUs. The YFRF-200 Reader just needs to communicate with the ISO 14443-4 compliant cards through exchanging ISO 7816-4 APDUs and Responses. YFRF-200 will handle the ISO 14443 Parts 1-4 Protocols internally.

MIFARE 1K, 4K, Mini and Ultralight tags are supported through the T=CL emulation. Simply treat the MIFARE tags as standard ISO 14443-4 tags. For more information, please refer to topic: **PICC Commands for MIFARE Classic Memory Tags.**

ISO 7816-4 APDU Format

| Command | class | INS | P1 | P2 | Lc | Data In | Le |
|-------------------------|-------|-----|----|----|-----------------------|---------|--------------------------------------|
| ISO 7816 Part 4 Command | - | - | - | - | Length Of the Data In | - | Expected Length of the Response Data |

ISO 7816-4 Response Format (Data + 2bytes)

| Response | Data Out | | |
|----------|---------------|-----|-----|
| Result | Response Data | SW1 | SW2 |

Response Codes

| Result | SW1 SW2 | Meaning |
|---------|---------|---------------------------------------|
| Success | 90 00h | The operation completed successfully. |
| Error | 63 00h | The operation failed. |

Typical sequence may be:

1. Present the Tag and Connect the PICC Interface
2. Read/Update the memory of the tag

1. Connect the Tag
2. Send an APDU, Get Challenge.

<< 00 84 00 00 08h

>> 1A F7 F3 1B CD 2B A9 58h [90 00h]

Note: For ISO14443-4 Type A tags, the ATS can be obtained by using the APDU "FF CA 00 00 01h"
